Research project «Heidi»

Say cheese!

Discover the secret of
facial growth.

We are looking for curious **children between the ages of 6 and 7** to have their face and mouth scanned for our research project. The scan is **radiation-free, painless** and **super quick**.

Please don't hesitate to contact us if you have any questions or would like to have more information.

We appreciate you helping us!

Basel

Research project «Heidi»

Join the Heidi study!

Discover the secret of facial growth.

What should you expect?

Visit us at the UZB for a scan of your oral cavity and a facial scan. You will be invited back one year later. During the second visit, the same scans will be performed and a cheek swab will be taken to record your DNA. All data will of course be kept anonymously!

What is the aim of this study?

We want to investigate how the face and mouth change as the child grows. To accomplish this, the 3D images will be superimposed to calculate the exact changes.

Who will benefit from this study?

The purpose of this study is to offer future patients the opportunity to obtain predictions of facial growth without X-rays or uncomfortable impressions and to optimize our treatment planning.
